

The Face of Winter

How to Protect Your Skin in the Dry, Cold Months

Barbara Hey

Winter can be tough on skin, but there's much you can do to defend against the assaults of the season. The skin's primary role -- to protect the body -- is ever more important in extreme weather, and in most locations, that means extreme cold outside and dry, over-heated air inside during the winter. Your epidermis must "weather" these drastic fluctuations in temperature, and often the result is chapped, scaly, flaky skin.

Facing the Frost

The biggest wintertime concern is dehydration. In colder climates, you definitely need to increase the protection quotient. "You must

months. And this is especially important for the face. And if much time is spent outdoors skiing, snowboarding, or walking, for example, your complexion needs heavy-duty protection from brisk wind and winter sun as well.

"People often forget about sunscreen in the winter," says Schumann-Ortega. For regular outdoor time -- a few hours a day -- a sunscreen with an SPF of 20 should be sufficient. But if a winter trip on the slopes or shore is part of the plan, sunscreen with a higher protective factor is needed, even if your time is spent beneath an umbrella. "Both snow and sand reflect the sun," she says, so don't be caught unprepared. Double your efforts to protect the parts of the

over-treat skin to keep it hydrated," says Barbara Schumann-Ortega, vice president of Wilma Schumann Skin Care in Coral Gables, Florida. That means a shift from lighter skin care products used during warmer months to winter-weight products, such as thicker, cream-based cleansers and moisturizers. These will provide stronger barriers against the harsh environment of winter

face particularly prone to display the effects of dryness: The lips and the area around the eyes need a continual shield against the elements. Ask your skin care professional which products are appropriate for your skin type and effective, seasonal moisturizers and sunscreens.

The Face of Winter

What Is Reiki?

Coenzyme Q10

Continued from page 1

"When it's cold, you lose blood flow to the skin," says Schumann-Ortega. The result is a dry, dull tone. Facial treatments can increase circulation and rejuvenate a healthy glow. But, Schumann-Ortega cautions, be careful with peels and resurfacing treatments during the winter, as they can do more damage than good with skin that's already taxed from the harsh environmental conditions.

Winterizing the Body

It's not just the face that suffers in the winter. Skin everywhere dries out, and gets that flaky look and uncomfortable winter itch. Hot baths -- a delightful antidote to the chill -- can further exacerbate dry skin. The solution? Add 10 drops of an aromatic essential oil to the bath to moisturize as you soak. (Lavender is particularly soothing to dry skin.) Then apply an emollient moisturizer -- a product that feels particularly thick and creamy to the touch, like a body butter -- geared for extra dry, rough, chapped, or cracked skin. Apply it immediately after drying off, when the skin can most readily absorb the lotion and restore its barrier. If dryness is still bothersome, indulge in a salt rub and full-body conditioning wrap to remoisturize.

And don't forget feet and hands. The feet, hidden by socks and boots all winter long, often go neglected this time of year and need attention, but the most obvious casualties of winter are the hands. Exposed to the elements and the subject of frequent hand-washing during the cold and flu season, hands can turn to rawhide just as holiday parties go into full swing -- not an elegant look for holding onto a champagne flute.

This is the season to slather hands with heavy, oil-rich cream at night and cover them with gloves. And don't forget feet: they also require the same special care. Consider a moisturizer for them in the evenings and sleep with socks on. In the morning, your feet and hands will feel soft and moisturized. Your skin care professional can recommend appropriate gloves, socks, and a home-care routine for this process. In addition, treat hands and feet to regular spa treatments to exfoliate dead skin cells, and paraffin treatments to replenish and moisturize.

Relax and Enjoy It

In winter, and all seasons, stress can disrupt even the best skin. "We always ask clients what's going on in life, since adrenaline, holiday pressures, and even joy can have an effect on body chemistry," says Schumann-Ortega. The skin reflects it all. "Some clients may come in after four weeks and they look like a train wreck," she says. So do your best to minimize the effects of stress with exercise, meditation, and proper diet. And don't skimp on the self-care. Schedule time for pampering, relaxing treatments.

Some final tips:

- Drink water. Even when there's a chill in the air and thirst isn't overwhelming, water consumption needs to be high to combat the dry air.
- Avoid products with a high percentage

of synthetic ingredients (propylene glycol, petroleum), chemical detergents (sodium laurel sulfates), and artificial colors and fragrances.

- Employ quality skin care products suited to your skin type.
- Check your medications. Illness and ongoing pharmaceuticals can upset pH balance.
- Incorporate nutritional supplements into your skin health regimen, such as essential fatty acids, zinc, magnesium, vitamin A, and B vitamins.

Winter doesn't have to take its long, hard toll on your skin. Ask your skin care professional about hydrating products and circulation-enhancing treatments to ease the long, dry months of winter. After all, spring is just around the corner.

When you're outside in harsh conditions, cover up with gloves, scarves, and sunscreen.

What Is Reiki?

Understanding Energy Work

A type of energy bodywork, reiki (pronounced ray-key) relies on the ancient belief in the life force energy, referred to as chi, that flows through all things. This life force runs throughout pathways in the body called meridians, nourishing organs and cells and supporting vital functions. When this energy is disrupted by negative thoughts, feelings or actions, illness and disease result. A reiki practitioner's hands hover just above a person's body, sensing the affected areas and infusing them with positive flow. This raises the energetic vibration and breaks up the negativity to heal, clear and restore the natural flow of the life force. The reiki practitioner, trained to access and serve as a channel for the life energy, places his hands on or just above the client's body and uses a passive touch that some clients experience with warmth or tingling. The hands remain in position for 3-5 minutes, alternately covering 10-12 positions over the body.

Thought to be Tibetan Buddhist in origin, the practice of reiki is comprised

of three levels of training. Through this training, the practitioner learns how to access energy flow through the hands to heal. Completion of the third and highest level of training results in the title of reiki master. Reiki is used to accelerate healing, assist the body in cleansing toxins, balance the flow of subtle energy by releasing blockages, and help the client contact the healer within.

According to www.reiki.org, reiki is beginning to gain acceptance as a meaningful and cost-effective way to improve patient care in hospitals and clinics across America. In an interview on the website, Dr. David Guillion, an oncologist at Marin General Hospital in California, says, "I feel we need to do whatever is in our power to help the patient. We provide state of the art medicine in our office, but healing is a multidimensional process. I endorse the idea that there is a potential healing that can take place utilizing energy." For more information, consult your bodywork practitioner.

Reiki balances subtle but vital energy.

Coenzyme Q10

The Wrinkle Cure

Air pollutants, toxins, cigarette smoke, cell metabolism, exposure to the sun, and other environmental factors initiate free radicals, which can cause dangerous reactions that destroy cells and damage DNA, proteins, and fats. Free radicals also interfere with collagen production and integrity, resulting in loss of elasticity and, ultimately, aging skin. Although this is a natural and unavoidable by-product of metabolism, an overabundance of free radical damage can cause premature aging and wrinkles. Fortunately, there's a nutritional way to fight the elements.

Coenzyme Q10, also called CoQ10 and ubiquinone, is a fat soluble, vitamin-like nutrient present in virtually all cells and considered the

spark plug of the body, helping to produce and regulate energy as well as fighting free radicals as an antioxidant.

CoQ10 levels are highest during the first 20 years of life and decline with time, so much so that at age 80, CoQ10 levels may be lower than at birth. Yet the body's demand for CoQ10 increases with age. Furthermore, statin (cholesterol-lowering) medications can further deplete the body of CoQ10.

The recommended daily CoQ10 dose is 30 mg, in combination with alpha lipoic acid and vitamins A, C, E, and selenium. Foods highest in CoQ10 include sardines, beef, peanuts, spinach, and albacore tuna. However, it would take a pound of sardines, two

pounds of beef, or two-and-a-half pounds of peanuts to provide 30 mg, and cooking foods at high temperatures degrades the enzyme. Consequently, CoQ10 supplementation is likely necessary to achieve therapeutic effects.

CoQ10 can also benefit topically, as it's a small molecule that can easily penetrate the skin. When CoQ10 is combined with vitamins C and E in creams or lotions, the synergistic effect can neutralize free radicals, thus reducing wrinkles.

Supplementing with CoQ10 is not only a good antiaging strategy for the skin, it can also enhance energy, cognition, heart health, stroke prevention, and immune support.

He who can no longer pause to wonder and stand rapt in awe, is as good as dead; his eyes are closed.

-Albert Einstein

Austin Massage Connection is an online directory of massage professionals in the Austin, Texas area. Austin Massage Connection makes sure they find what they are looking for... You! Not only will they find your name, they can find information about your business and can even buy products from your very own Website simply by using our easy Massage Therapist Search.
